63 ceramics perforated blocks 14 x 19 x 14 cm each

Final measures: 522 x 123 cm

Héctor Zamora, 2009

Measures in centimeters.

order to mount

measures in centimeters

floor

Steps to mount:

1

Using laser level or thread level, draw the rows and columns to help to locate the block on their correct position, please follow the plans. Is very important to use the exactly part of the block following the order of the plan (order to mount)

2

To hang blocks on the wall, please use the best option for the kind of wall that you have:

for a concrete or bricks wall: drill, then screw or use nails for concrete (stainless or water proof)

for a wood or drywall, use screw for wood or drywall or normal nails (stainless or water proof)

Consider 2 for each block or part of block. With 3cm out of the wall will be enough

If you feel that the screws or nails appear too much, please feel free to paint in white or the color of the block to get invisibility.

3

Hang each part of block following both plans, to get the exactly order.

-----

The piece can be mount indoor or outdoor spaces.
